

Instructional “Opportunity”

Name: Dr. Tami J. Rogers Contact: trogers11@valenciacc.edu

Target Audience: 5th semester (final semester) ADN nursing students in final course of Leadership and Management. The class is entire online format.

Situation: Utilize simulation within this course to reinforce course and/or clinical outcomes

“Opportunity”: I am unsure how to introduce simulation into the curriculum in this last course. I would like to utilize this teaching strategy to document clinical competency. However, I am not certain it has been illustrated in the literature, in nursing, that learning does occur during simulation. Many factors are to consider: time out of the clinical arena, online format, grading rubric and achievement of clinical and/or course outcomes. We do have cameras where simulations could be recorded, viewed and discussed. However, is this effective? Help!
